## Making Sense of Research in Nursing, Health and Social Care Pam Moule

What is research? Why is it important in health and nursing? How should students use evidence in practice?

This short and simple book for those who are completely new to research will answer all your students' questions about the subject. It will help them to make sense of the various and often confusing research methods and terminology, to read and appraise literature and to understand how research is implemented in practice.

It features:

- **Case examples** of real research from a variety of settings and a range of countries so that students can see how research applies to the real world
- **Tools, examples and frameworks** to help students to find, appraise and critique research
- **Chapter learning outcomes and key points** to help students to remember important information
- A **companion website** with **interactive glossary** and **reflective exercises** to help students test their knowledge and apply it to practice, printable **step-by-step frameworks** for use when searching for or critiquing a paper, and direct links to relevant **SAGE journal articles** and **weblinks**.
- Further resources for lecturers are available, including all the practice examples from the book, seminar question ideas and critical appraisal powerpoints.

The book is essential reading for undergraduate and postgraduate students of nursing and health in the UK and internationally.
