Distance Sampling: Methods and Applications (Methods in Statistical Ecology) Stephen T. Buckland, E.A. Rexstad, Tiago A. Marques, C.S. Oedekoven

In this book, the authors cover the basic methods and advances within distance sampling that are most valuable to practitioners and in ecology more broadly. This is the fourth book dedicated to distance sampling. In the decade since the last book published, there have been a number of new developments. The intervening years have also shown which advances are of most use. This self-contained book covers topics from the previous publications, while also including recent developments in method, software and application.

Distance sampling refers to a suite of methods, including line and point transect sampling, in which animal density or abundance is estimated from a sample of distances to detected individuals. The book illustrates these methods through case studies; data sets and computer code are supplied to readers through the book's accompanying website. Some of the case studies use the software Distance, while others use R code. The book is in three parts. The first part addresses basic methods, the design of surveys, distance sampling experiments, field methods and data issues. The second part develops a range of modelling approaches for distance sampling data. The third part describes variations in the basic method; discusses special issues that arise when sampling different taxa (songbirds, seabirds, cetaceans, primates, ungulates, butterflies, and plants); considers advances to deal with failures of the key assumptions; and provides a check-list for those conducting surveys.

From reader reviews:

Morgan Woods:

Why don't make it to be your habit? Right now, try to ready your time to do the important action, like looking for your favorite publication and reading a guide. Beside you can solve your condition; you can add your knowledge by the guide entitled Distance Sampling: Methods and Applications (Methods in Statistical Ecology). Try to the actual book Distance Sampling: Methods and Applications (Methods in Statistical Ecology) as your pal. It means that it can to become your friend when you experience alone and beside those of course make you smarter than in the past. Yeah, it is very fortunated for you personally. The book makes you a lot more confidence because you can know almost everything by the book. So , we need to make new experience in addition to knowledge with this book.

April Hall:

Now a day those who Living in the era where everything reachable by match the internet and the resources included can be true or not involve people to be aware of each info they get. How a lot more to be smart in obtaining any information nowadays? Of course the answer then is reading a book. Studying a book can help individuals out of this uncertainty Information mainly this Distance Sampling: Methods and Applications (Methods in Statistical Ecology) book since this book offers you rich data and knowledge. Of course the data in this book hundred per-cent guarantees there is no doubt in it everbody knows.

Carol Sage:

The e-book with title Distance Sampling: Methods and Applications (Methods in Statistical Ecology) includes a lot of information that you can discover it. You can get a lot of help after read this book. This kind of book exist new knowledge the information that exist in this e-book represented the condition of the world currently. That is important to yo7u to learn how the improvement of the world. This kind of book will bring you inside new era of the internationalization. You can read the e-book on your own smart phone, so you can read the item anywhere you want.

Miguel Lynch:

Within this era which is the greater man or woman or who has ability to do something more are more treasured than other. Do you want to become considered one of it? It is just simple method to have that. What you must do is just spending your time not very much but quite enough to get a look at some books. On the list of books in the top record in your reading list is Distance Sampling: Methods and Applications (Methods in Statistical Ecology). This book which can be qualified as The Hungry Mountains can get you closer in growing to be precious person. By looking upwards and review this e-book you can get many advantages.
