Extensional Tectonics: Regional-Scale Processes (Key Issues in Earth Sciences) R. E. Holdsworth

This book forms the first of a two part volume containing a compilation of 35 classic papers on extensional tectonics, with particular emphasis on petroleum-related features. Each part comprises a set of scientifically significant papers from the last 20 years taken from the Journal of the Geological Society and various Special Publications of the Geological Society. The present volume focuses on regional scale processes under the headings: Mechanical and Thermal Consequences of Extensional Basin Formation; Stratigraphic Consequences of Extensional Tectonics; and The Uplift and Erosion of Sedimentary Basins and the Role of Overpressure. The book begins with a new scientific and historical review of the subject and the context of the papers contained therein. By compiling some of the most important papers on extensional tectonics Bob Holdsworth & Johnathan Turner have created a volume intended for a wide readership. It is of special relevance to MSc and PhD students working in any Petroleum-related scientific field and to Petroleum industry geoscientists around the world. It is also of great use to undergraduates studying courses on Structural Geology/Tectonics, Petroleum Geology, Basin Dynamics etc.

The Geological Society of London

Founded in 1807, the Geological Society of London is the oldest geological society in the world, and one of the largest publishers in the Earth sciences.

The Society publishes a wide range of high-quality peer-reviewed titles for academics and professionals working in the geosciences, and enjoys an enviable international reputation for the quality of its work.

The many areas in which we publish in include:

- Petroleum geology
- Tectonics, structural geology and geodynamics
- Stratigraphy, sedimentology and paleontology
- Volcanology, magmatic studies and geochemistry
- Remote sensing
- History of geology
- Regional geology guides
