Methodical Problems in Early Detection Programmes: Symposium held by the Deutsche Gesellschaft für Medizinische Dokumentation, Informatik und ... (Lecture Notes in Medical Informatics)

The symposium held at Freiburg on September 10th, 1983 had been concerned with methodical problems in early detection, chiefly of cancer. The first lectures dealt with mathematical models. They were followed by contributions to the possibilities of obtaining the parameters required by the models and for the assessment of the methods. The two final lectures outlined a monitoring system for rare diseases and some problems in early detecting heart and circulation diseases. The meeting had been organized by the Deutsche Gesellschaft für Medizinische Dokumentation, Informatik und Statistik (GMDS). Thus the programme committee was set up by the heads of the GMDS Arbeitsgruppen affected by the respective topics, namely Dr. Keil (epidemiology), Prof. Dr. Neis (statistical methods), PD Dr. Schwartz (systematic preventive checkup and early detection), PD Dr. Trampisch (methods of prognosis and decision making) and the signer. This is a welcome opportunity to put on record my thanks to various people and organizations. The lecturers had elaborated their manuscripts and some have revised them. The individual discussions had been conducted by Prof. Dr. Dietz, Prof. Dr. Michaelis, Prof. Dr.
