Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics)

Sara Seager

Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics) Sara Seager

Over the past twenty years, astronomers have identified hundreds of extrasolar planets--planets orbiting stars other than the sun. Recent research in this burgeoning field has made it possible to observe and measure the atmospheres of these exoplanets. This is the first textbook to describe the basic physical processes--including radiative transfer, molecular absorption, and chemical processes--common to all planetary atmospheres, as well as the transit, eclipse, and thermal phase variation observations that are unique to exoplanets.

In each chapter, Sara Seager offers a conceptual introduction, examples that combine the relevant physics equations with real data, and exercises. Topics range from foundational knowledge, such as the origin of atmospheric composition and planetary spectra, to more advanced concepts, such as solutions to the radiative transfer equation, polarization, and molecular and condensate opacities. Since planets vary widely in their atmospheric properties, Seager emphasizes the major physical processes that govern all planetary atmospheres.

Moving from first principles to cutting-edge research, *Exoplanet Atmospheres* is an ideal resource for students and researchers in astronomy and earth sciences, one that will help prepare them for the next generation of planetary science.

- The first textbook to describe exoplanet atmospheres
- Illustrates concepts using examples grounded in real data
- Provides a step-by-step guide to understanding the structure and emergent spectrum of a planetary atmosphere
- Includes exercises for students

From reader reviews:

Eva Burton:

Information is provisions for those to get better life, information nowadays can get by anyone on everywhere. The information can be a information or any news even a concern. What people must be consider while those information which is from the former life are hard to be find than now is taking seriously which one is acceptable to believe or which one the actual resource are convinced. If you obtain the unstable resource then you obtain it as your main information there will be huge disadvantage for you. All those possibilities will not happen within you if you take Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics) as your daily resource information.

Rudy Nixon:

Your reading 6th sense will not betray an individual, why because this Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics) publication written by well-known writer we are excited for well how to make book which might be understand by anyone who have read the book. Written with good manner for you, still dripping wet every ideas and writing skill only for eliminate your personal hunger then you still doubt Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics) as good book not only by the cover but also from the content. This is one guide that can break don't evaluate book by its cover, so do you still needing another sixth sense to pick this!? Oh come on your examining sixth sense already alerted you so why you have to listening to a different sixth sense.

Glady Curry:

Are you kind of stressful person, only have 10 or even 15 minute in your morning to upgrading your mind proficiency or thinking skill even analytical thinking? Then you are having problem with the book as compared to can satisfy your short space of time to read it because pretty much everything time you only find guide that need more time to be learn. Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics) can be your answer mainly because it can be read by a person who have those short time problems.

Phillip Martin:

That e-book can make you to feel relax. This kind of book Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics) was vibrant and of course has pictures on the website. As we know that book Exoplanet Atmospheres: Physical Processes (Princeton Series in Astrophysics) has many kinds or style. Start from kids until teenagers. For example Naruto or Private eye Conan you can read and think that you are the character on there. Therefore not at all of book are make you bored, any it offers up you feel happy, fun and unwind. Try to choose the best book for yourself and try to like reading that will.
