**Turbulence in the Solar Wind (Lecture Notes in Physics)** Roberto Bruno, Vincenzo Carbone

This book provides an overview of solar wind turbulence from both the theoretical and observational perspective. It argues that the interplanetary medium offers the best opportunity to directly study turbulent fluctuations in collisionless plasmas. In fact, during expansion, the solar wind evolves towards a state characterized by large-amplitude fluctuations in all observed parameters, which resembles, at least at large scales, the well-known hydrodynamic turbulence.

This text starts with historical references to past observations and experiments on turbulent flows. It then introduces the Navier-Stokes equations for a magnetized plasma whose low-frequency turbulence evolution is described within the framework of the MHD approximation. It also considers the scaling of plasma and magnetic field fluctuations and the study of nonlinear energy cascades within the same framework. It reports observations of turbulence in the ecliptic and at high latitude, treating Alfvénic and compressive fluctuations separately in order to explain the transport of mass, momentum and energy during the expansion. Further, existing models are compared with direct observations in the heliosphere.

The problem of self-similar and anomalous fluctuations in the solar wind is then addressed using tools provided by dynamical system theory and discussed on the basis of available models and observations. The book highlights observations of Yaglom's law in solar wind turbulence, which is one of the most important findings in fully developed turbulence and directly related to the long-lasting and still unsolved problem of solar wind plasma heating.

Lastly, it includes a short chapter dedicated to the kinetic range of fluctuations, which has recently been receiving more attention from the space plasma community, since this is inherently related to turbulent energy dissipation and consequent plasma heating. It particularly focuses on the nature and role of the fluctuations populating this frequency range, and discusses several model predictions and recent observational findings in this context.

### **From reader reviews:**

#### **Patricia Frazier:**

Spent a free time for you to be fun activity to try and do! A lot of people spent their leisure time with their family, or all their friends. Usually they accomplishing activity like watching television, likely to beach, or picnic in the park. They actually doing ditto every week. Do you feel it? Would you like to something different to fill your free time/ holiday? Can be reading a book might be option to fill your no cost time/ holiday. The first thing you ask may be what kinds of publication that you should read. If you want to try look for book, may be the publication untitled Turbulence in the Solar Wind (Lecture Notes in Physics) can be good book to read. May be it can be best activity to you.

#### **Mildred Olsen:**

Playing with family within a park, coming to see the water world or hanging out with buddies is thing that usually you will have done when you have spare time, in that case why you don't try issue that really opposite from that. One activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you have been ride on and with addition info. Even you love Turbulence in the Solar Wind (Lecture Notes in Physics), you can enjoy both. It is very good combination right, you still want to miss it? What kind of hang-out type is it? Oh come on its mind hangout guys. What? Still don't obtain it, oh come on its referred to as reading friends.

#### **Hoyt Moore:**

Do you have something that you prefer such as book? The reserve lovers usually prefer to pick book like comic, quick story and the biggest the first is novel. Now, why not seeking Turbulence in the Solar Wind (Lecture Notes in Physics) that give your entertainment preference will be satisfied by reading this book. Reading addiction all over the world can be said as the way for people to know world much better then how they react towards the world. It can't be explained constantly that reading behavior only for the geeky particular person but for all of you who wants to possibly be success person. So , for all you who want to start studying as your good habit, you could pick Turbulence in the Solar Wind (Lecture Notes in Physics) become your starter.

#### **Lawrence Wilson:**

Reading a book to get new life style in this year; every people loves to learn a book. When you study a book you can get a lot of benefit. When you read textbooks, you can improve your knowledge, due to the fact book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you want to get information about your analysis, you can read education books, but if you act like you want to entertain yourself you are able to a fiction books, this kind of us novel, comics, and also soon. The Turbulence in the Solar Wind (Lecture Notes in Physics) offer you a new experience in reading a book.
