*Brian Milani*

**Designing the Green Economy: The Postindustrial Alternative to Corporate Globalization** Brian Milani  
Designing the Green Economy explores realistically, and in detail, the world's enormous potential for human and ecological regeneration. It also explains why this potential has been suppressed or distorted by industrial institutions—thus creating economic crisis, growing inequality, and environmental destruction. Today the great divide between waste and green economies can be narrowed by emerging legal, institutional, and market approaches to production and environmentalism. Milani explores the practical and theoretical implications of fully unleashing these new productive forces to create community-based ecological economies. Milani argues that neither sustainability, social justice nor economic stability can be secured without comprehensive redesign of the economy along ecological principles. He looks at key sectors of the economy—including manufacturing, energy, and money and finance—to illustrate how this redesign can, and is, taking place through both incremental grassroots initiatives and transformative politics.
